

IRONBARK

cabins

About Us

Ironbark Cabins is a small family owned & operated business in the Yarra Valley, Victoria. We are proud to be an Australian owned company supporting local trades & businesses.

Launched in 2019, Ironbark Cabins was created with the aim to provide an affordable, quality built and stylish offering for the small modular home industry.

We love helping people design & build their dream cabin, whether it be used as holiday accommodation, granny flat or main dwelling.

Our cabins are built tough and to Australian Building code. Both the Director (Gerard) and the company are registered Builders in the class of unlimited with the Victorian Building Authority.

To discuss options for your next project get in touch via email sales@ironbarkcabins.com.au or phone 0407 602 174.

Our social media pages are also a great place to keep up to date with all things Ironbark.

SOLID STEEL SUPER STRUCTURE

All of our cabins are fully engineered and certified. This enables locations of windows, doors, internal walls & cabinetry to be placed in any position without the need to have the frame reengineered which in turn saves on cost.

MODULAR DESIGN

Cabins can be joined side by side, end to end and stacked to increase internal floor space. Deck pods can also be installed in between cabins to provide additional external space as well as access between cabins. We can build up to 12M x 3.45M in a single cabin module and anything smaller.

SUITABLE FOR SLOPING LAND

our cabins are engineered to accommodate slopes of up to 1.8 meters using steel legs which are fabricated to suit site conditions. This also allows for cabins to be installed up to 1.8 meters off the ground where the surface is level.

BAL RATINGS UP TO FLAME ZONE

Our cabins can be modified to suit any BAL rating from LOW right through to FLAME ZONE

FULL OFF GRID CAPABILITY

Make your cabin completely self sufficient with the use of roof top solar, battery & generator back up, concealed holding tanks, rainwater tanks & compostable toilets.

FULLY INSULATED

Cabins come standard with roof blanket, polystyrene underfloor, R5 ceiling & R2.5 wall batts.

PERMANENT OR TEMPORARY FOOTING SYSTEM

We can install onto a concrete slab, bored piers, screw piles or Sure Foot system. Our engineers can tailor a system to best suit your needs.

BUILT TO AUSTRALIAN BUILDING CODE

Our cabins are built to Australian Building Code and all relevant Australian Standards.

MADE TO ORDER

We don't have set floorplans you have to choose from. Each cabin is custom built and designed to suit each client and what is important in terms of space, comfort & budget.

QUICK & EASY RELOCATION

Due to our unique top mounted lifting points, our cabins can be easily decommissioned and lifted onto a waiting truck or simply move to another location on your property.

Why choose Ironbark?
